1. Install Matplotlib and display a simple line graph.

2. Install Scikit-learn and print its version.

3. Create a NumPy array containing the first 20 natural numbers.

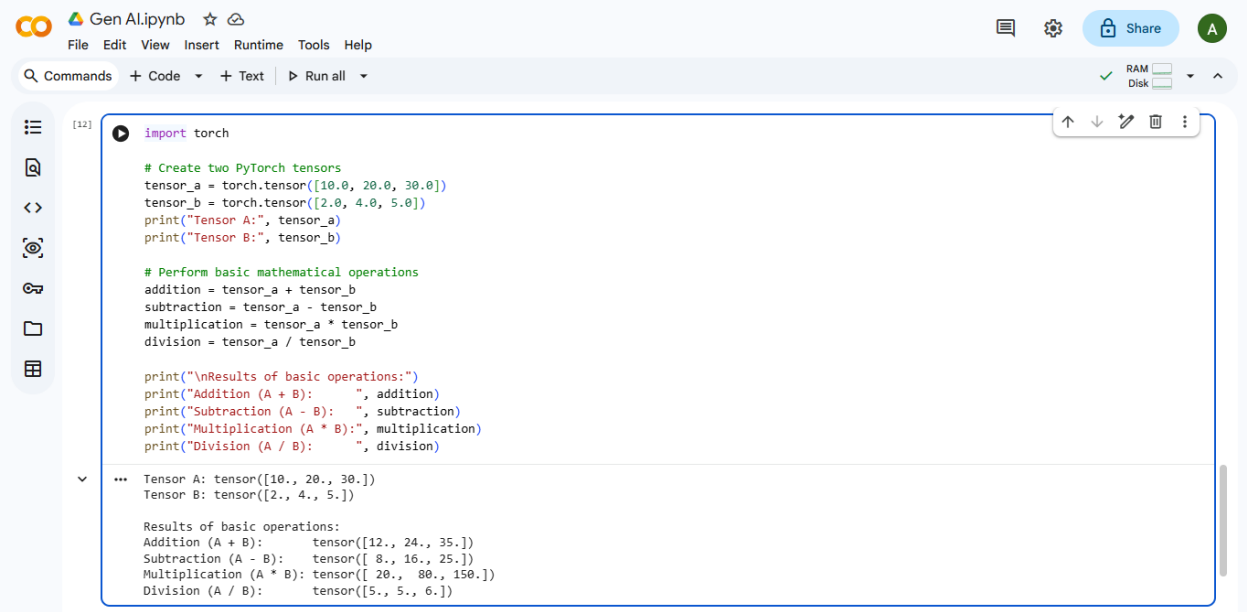

4. Create a Pandas DataFrame with student names and grades.

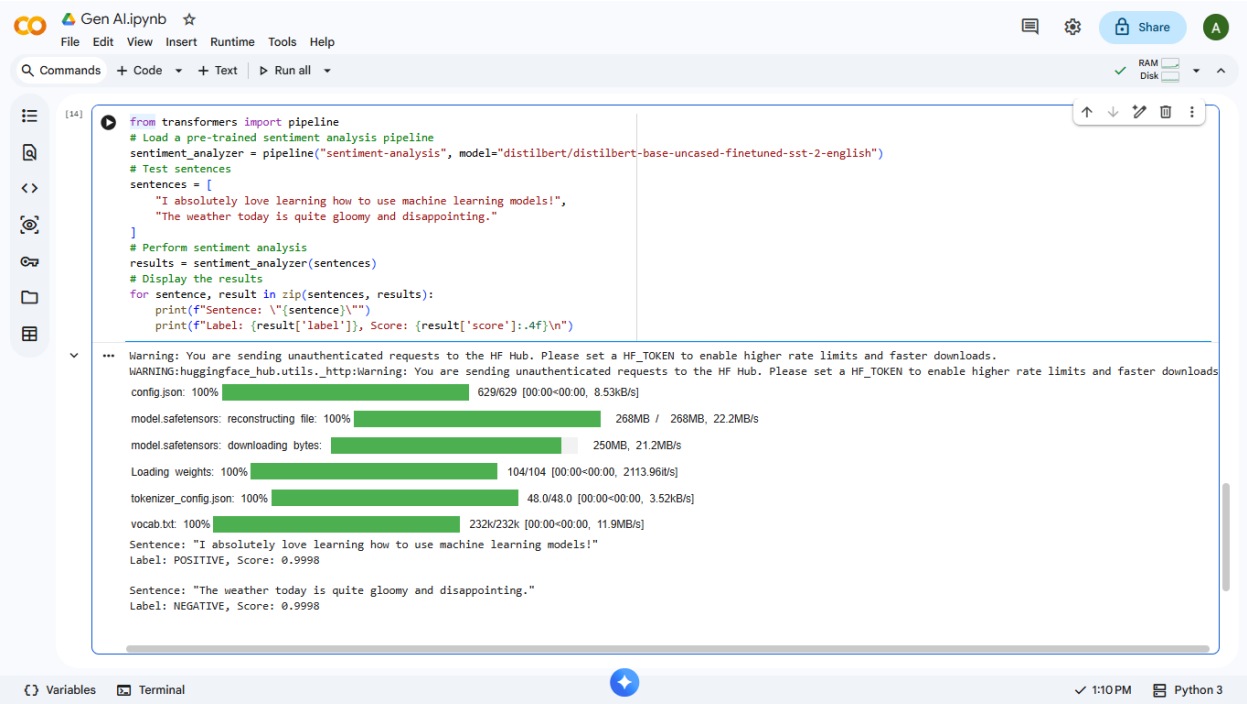

5. Verify the installed versions of all AI libraries on your system.

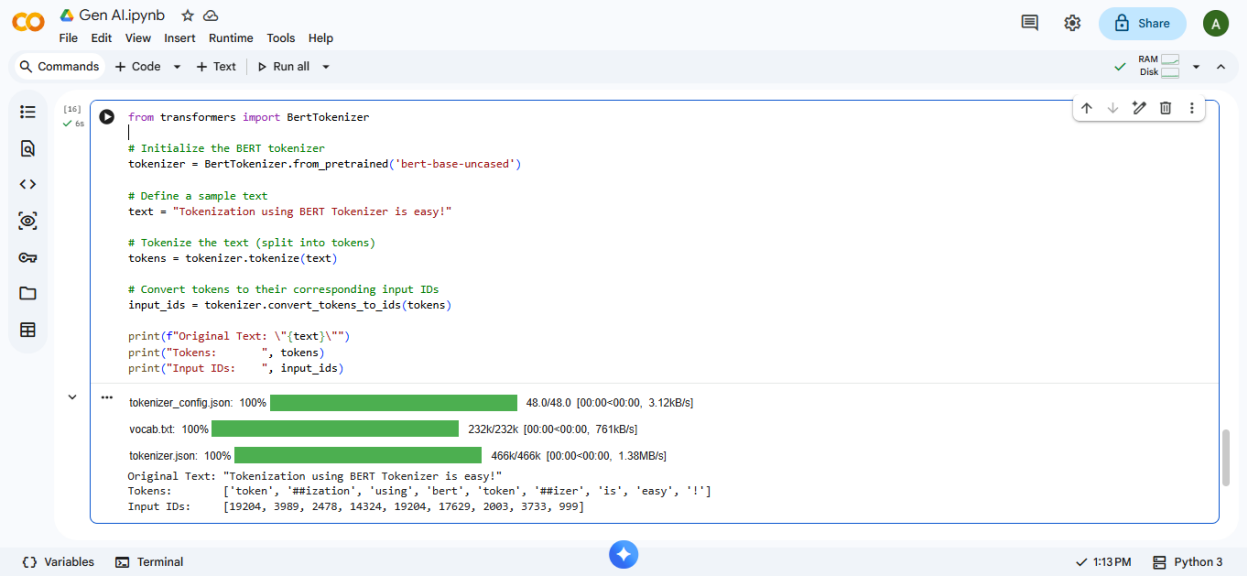

6. Create tensors using PyTorch and perform basic mathematical operations.

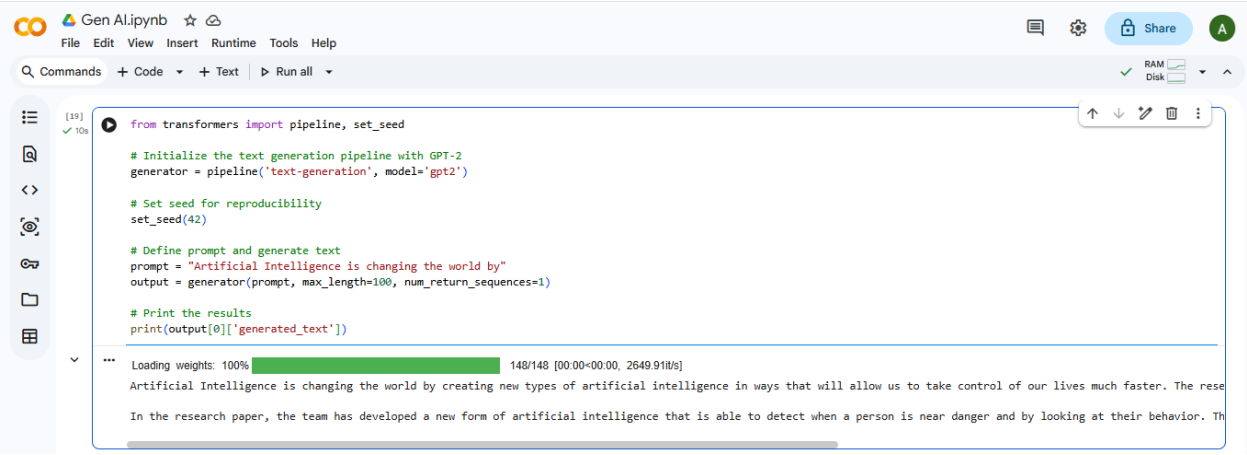

7. Load a Pre-trained Transformer Model using Hugging Face and perform sentiment analysis.

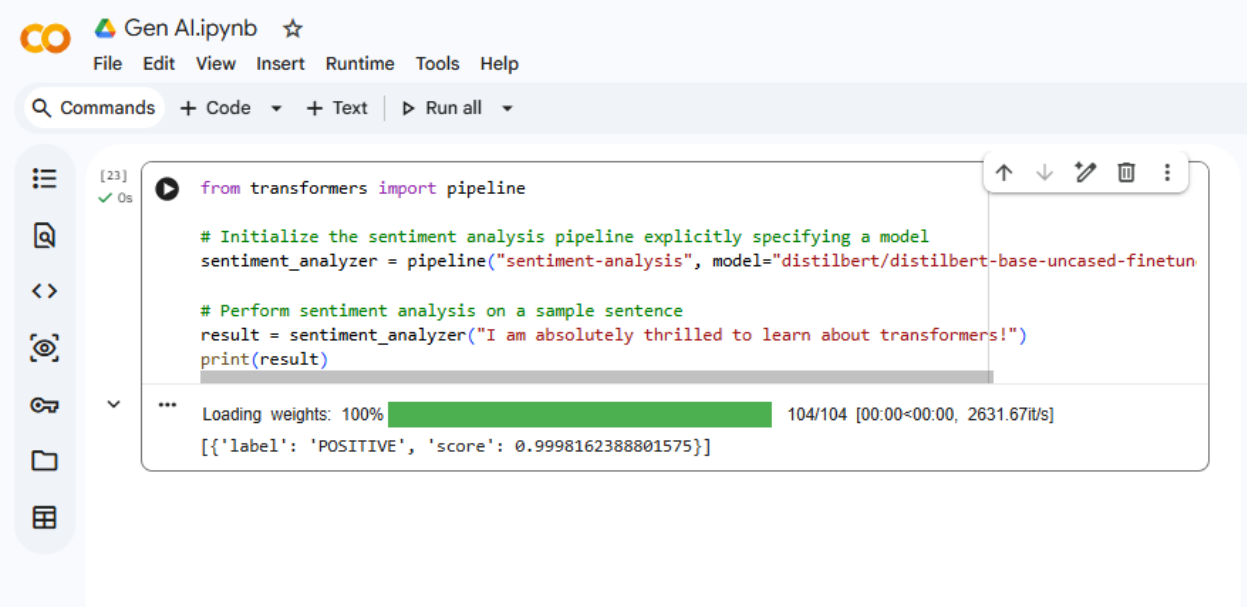

8. Tokenization using BERT Tokenizer

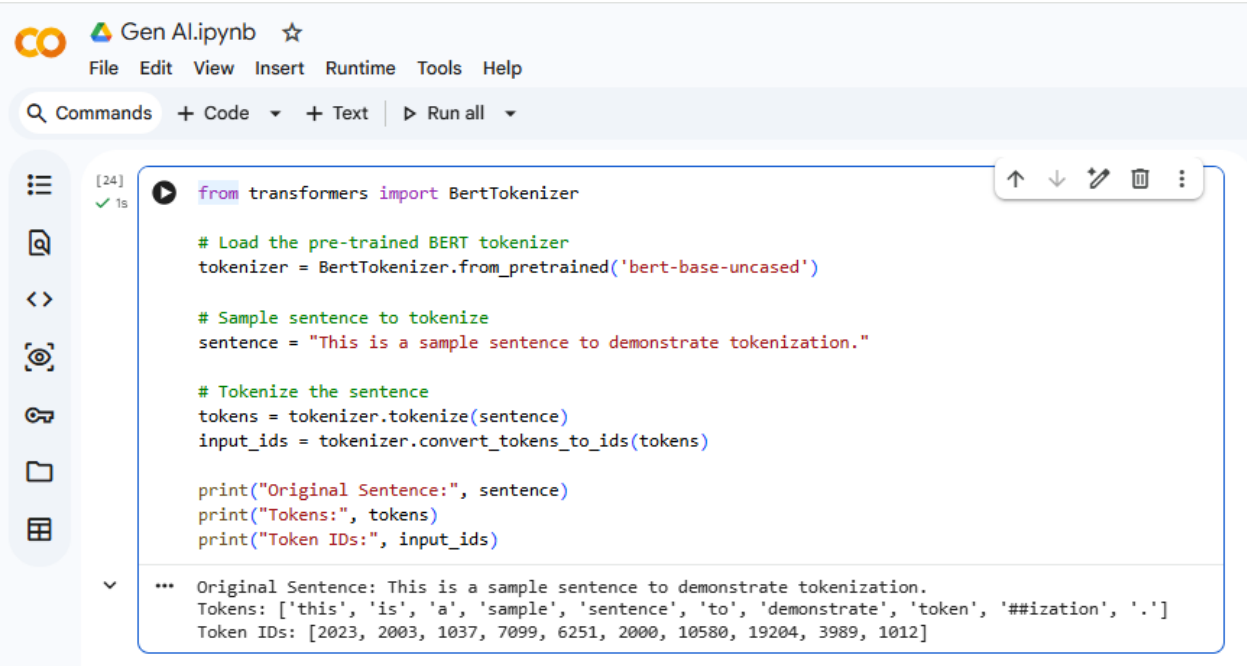

9. Generate text using a pre-trained GPT-2 model.

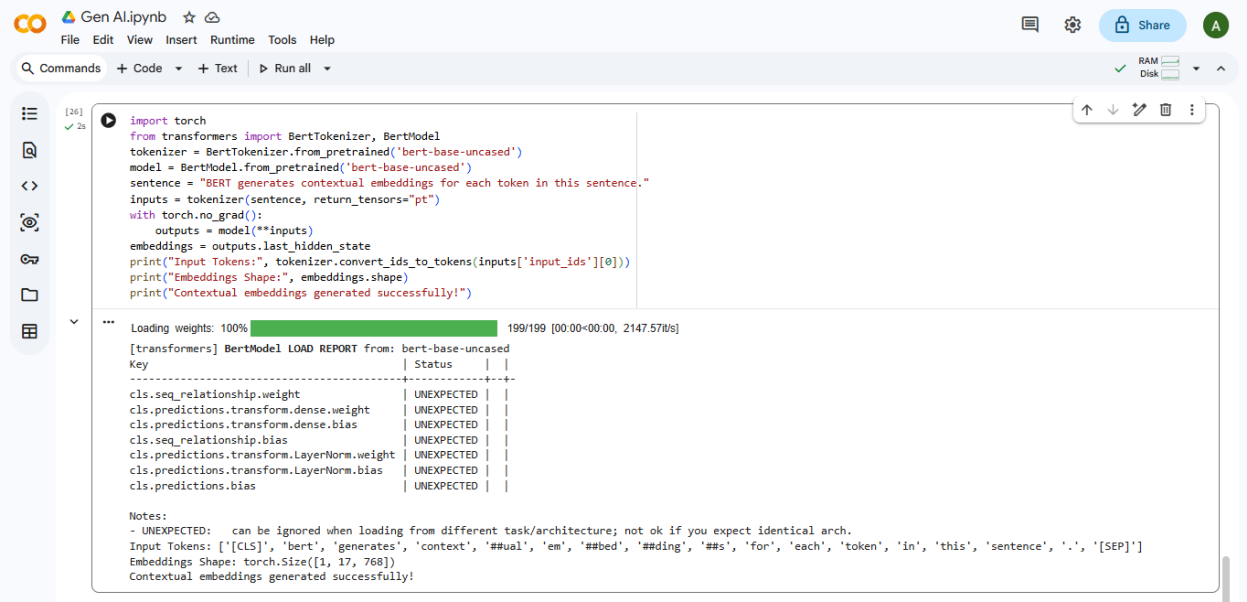

10. Load a pre-trained transformer model using the Hugging Face pipeline() API and perform sentiment analysis.

11. Load the BERT tokenizer and tokenize a sentence.

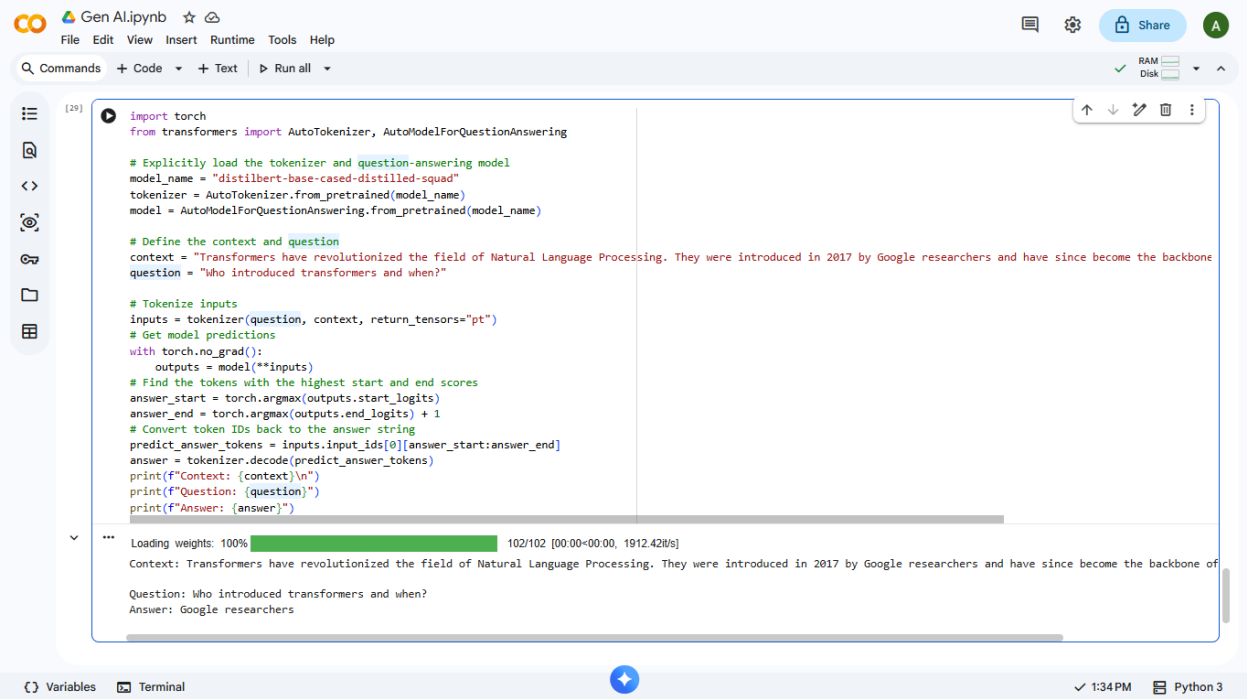

12. Load a pre-trained BERT model and generate contextual embeddings.

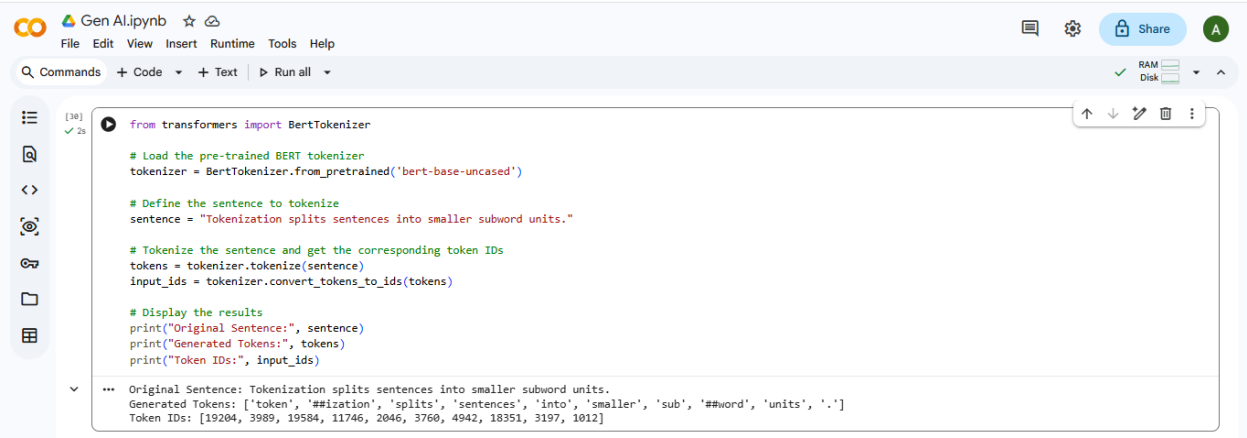

13. Generate text using a pre-trained GPT-2 model.

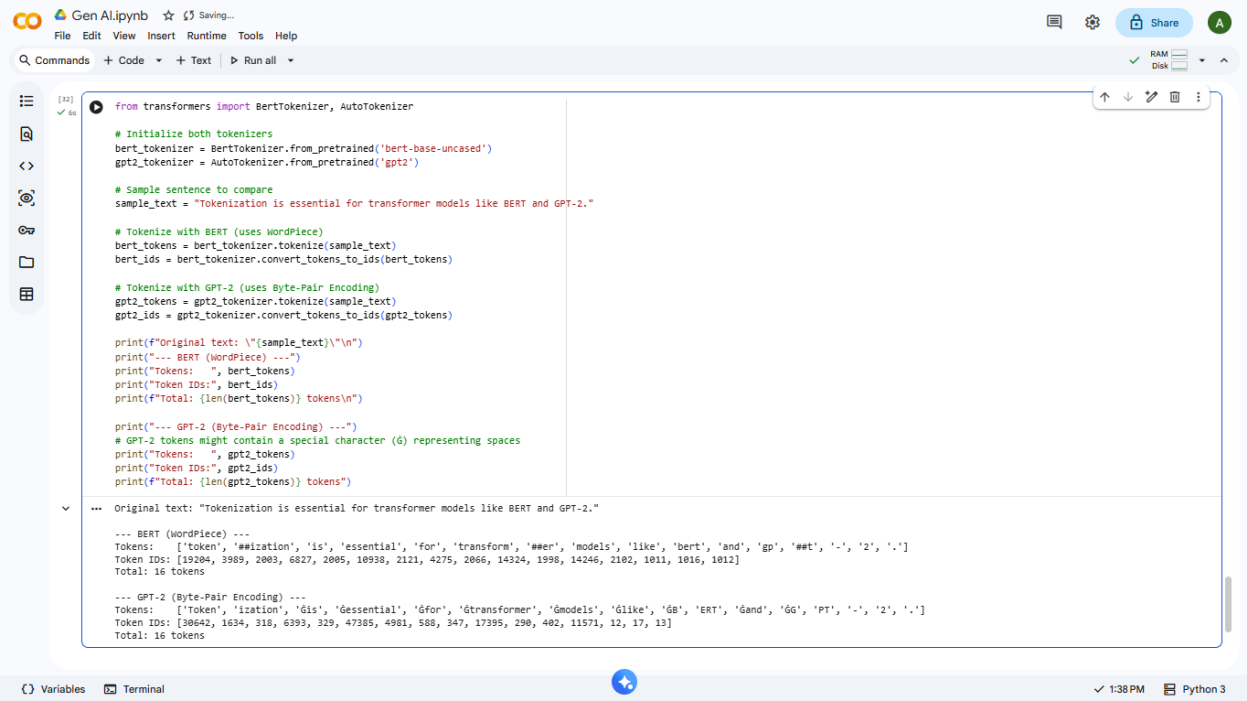

14. Question Answering using a Pre-trained Transformer

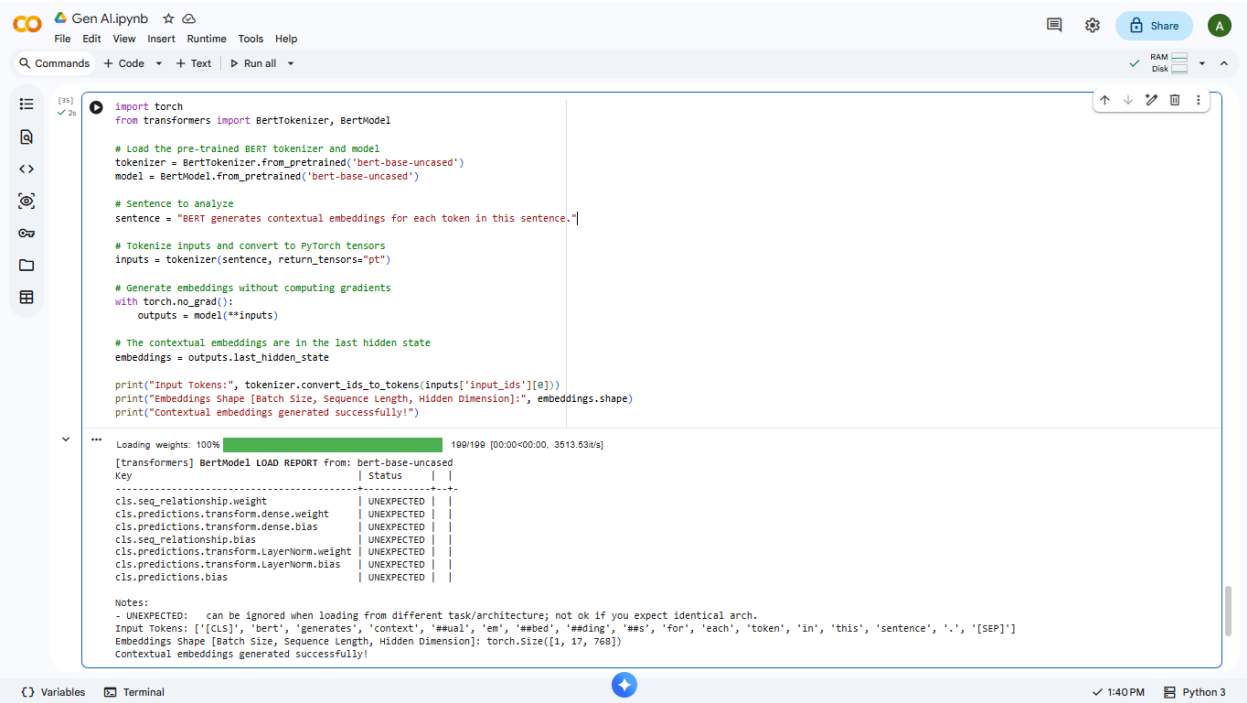

15. Tokenize a sentence using the BERT tokenizer and display the generated tokens and token IDs.

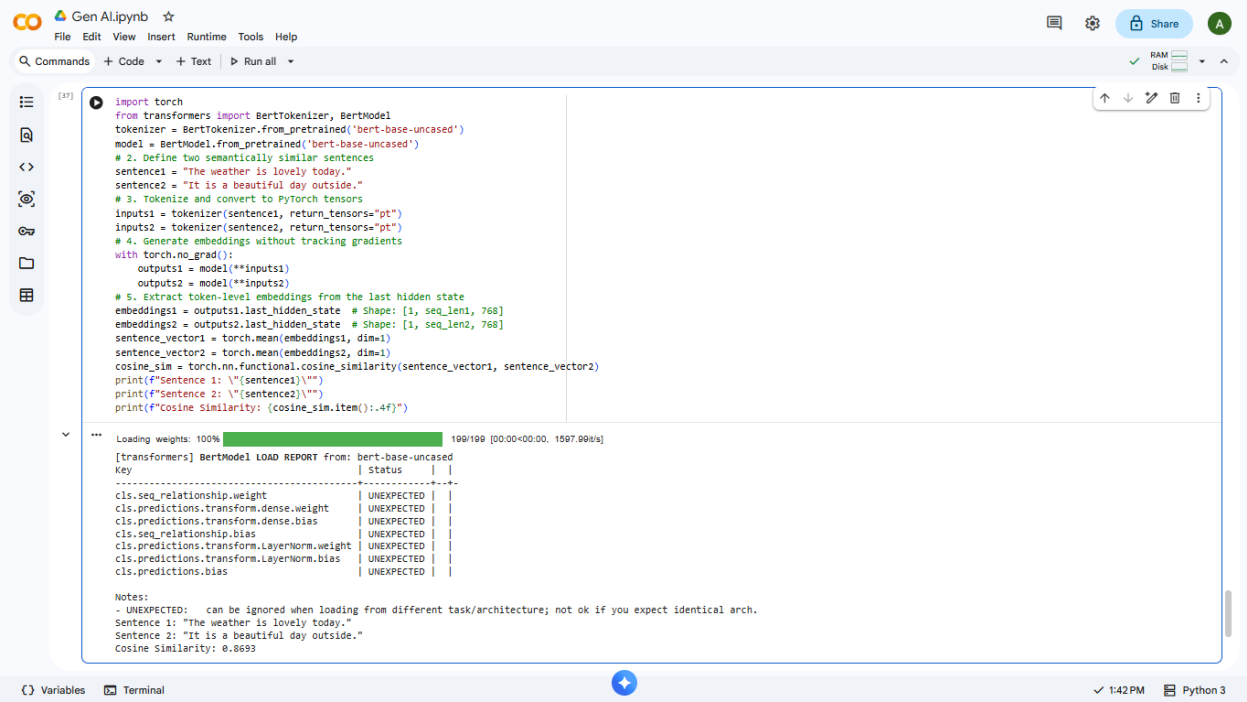

16. Compare the tokenization outputs of BERT and GPT-2.

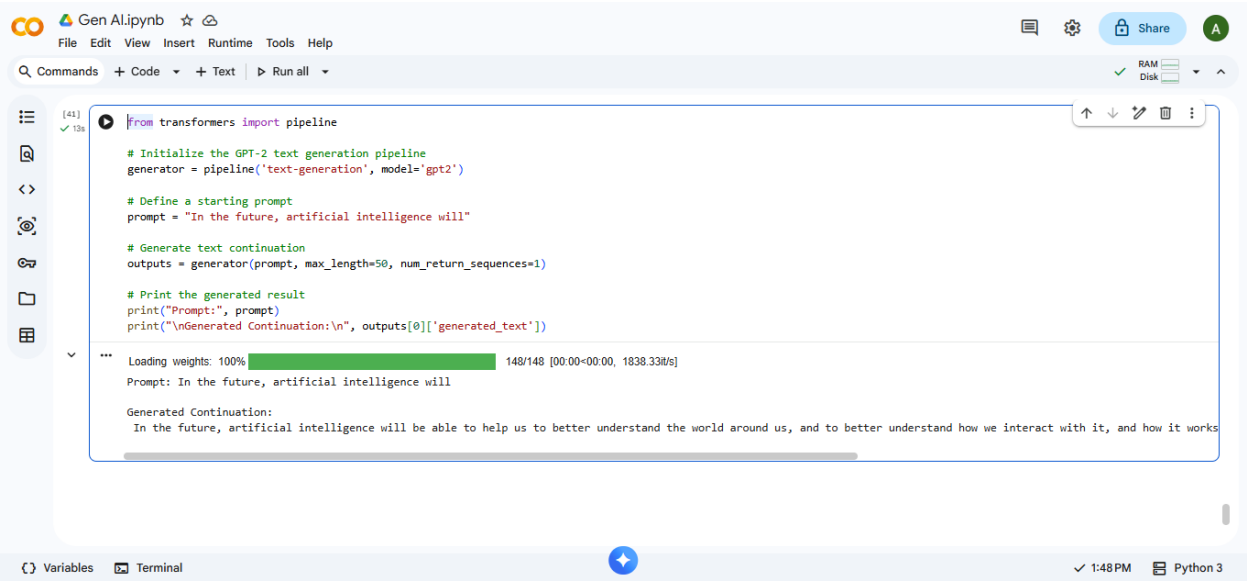

17. Generate contextual embeddings for a sentence using BERT.

18. Compare contextual embeddings generated for two semantically similar sentences.

19. Generate text from a prompt using the GPT-2 language model.

20. Generate and compare responses for multiple prompts using a pre-trained LLM.
